Last updated on 16 September 2020Wondering where can you test yourself or your family member for COVID-19 in Pune? How long do you have to wait for your test reports to arrive? What's the price of the test? Are testing facilities available at Pune International Airport? Read along to find answers to all your questions about coronavirus testing available in Pune.Table of ContentsWhat types of tests in Pune? Where can I be tested in Pune? Covid test at Poon Airport for passengers entry How much DOES THE COVID test cost at Poon's expense? When should you take the COVID test? What documents are required for the COVID test? How long do I take my COVID test results? What happens after the exam? What types of tests are available in Ponay, India? Currently, coronavirus testing in Pune are of the following types, as sanctioned by the Indian Medical Research Council (ICMR), india's head body of biomedical research:RT-PCR testThe RT-PCR test or the Reverse transcription-polymerase Chain Reaction is considered to relay the most accurate outcomes for COVID-19 diagnosis. To detect the presence of the virus, the suspect's nasal and throat swabs are collected. Researchers use an enzyme that converts RNA of genetic material in the virus into DNBA through a process called reverse transcription. A fluorescent signal in the RT-PCR device indicates the virus in the swab, even from asymptomatic patients. Rapid antibody testing in antibody tests, labs are exploring suspected blood samples for a possible antibody that the body may have developed in response to virus infection. While they can't really be used to detect the presence of the virus, serological testing points out whether a person has just been exposed to the virus. Laboratories search for the presence of two antibody cultivars, IgM and IgG antibodies, each reaching different points of infection. Interstate travelers, residents of containment areas, police, and paramilitary workers typically undergo this COVID test in Poon. ICMR recommends for a confirmation test after antibody testing because it can lead to false positives. The test is quick and inexpensive, therefore the test name is quick. What is a quick antigen test? Antigen is a toxin that creates an immune response. Here, the virus is also checked instead of its antibody. Professionals try to do this by detecting spike-in proteins Coronavirus is likely to be found in a suspected patient's nasal swab. Because the test relies on small amounts of test materials that are not multiplied like in the RT-PCR test, enough antigen material may be missing for the right diagnosis. This can lead to false negatives. Therefore, ICMR recommends that if your antigen test comes out to be negative, you should then go for an RT-PCR test for confirmation. What about the Tronate experiments? Trorat is a chip-based testing system originally used to detect HIV and tuberculosis. It works like an RT-PCR test to detect virus genes and not antibodies in the patient. The portable kit is operated with batteries and collects nasal swabs or throats. CB NAAT TestsCB-NAAT or Cartridge Based Nucleic Acid Amplification Test is also a testing method for tuberculosis but just like TrueNat tests it can be used to detect COVID-19. While TrueNat operates on batteries, CB-NAAT systems require a fixed power supply. A short cut in turn around rt-PCR test time, some hospitals in Pune are conducting CB-NAAT tests to confirm the results of the rapid antigen test. Where can I be tested in Pune? The increase in the number of cases in Kolkata and all of India has been met with a rapid increase in the number of COVID testing centers. Along with public health centers, numerous private laboratories have been set up following ICMR guidelines to meet testing demands. Below you can get a list of public and private laboratories in Hyderabad from where you can get a COVID test report. Note that you can't just walk into any of these centers for a COVID test without referral. As recommended by the Department of Health and Family Welfare, you should call 1075 free or central helpline number +91-11-23978046 for information before going. In Poon, you may also call 020-26127394, maharashtra state helpline number for COVID-19. You can go ahead with the test only if you have a COVID-19 test prescription from a qualified physician. Jupiter Lifeline Hospitals Limited, Pune: Google Location Call: +919172284772 or WhatsApp +91 91122 20011At-home collection for COVID Test in Pune©Wikimedia CommonsIf you want to get tested for coronavirus, you can opt for an at-home collection facility for COVID testing through online booking. Some laboratories such as Suburban and Metropolitan Diagnostics in Pune are currently providing facilities. This basically means you no longer need to step out of your home for a COVID test. Trained health officials arrive, worn on PPE, and collect samples, ensuring minimal contact in all while. For home testing, you also have rapid antigen testing and antibody testing kits available in Indiamart from ICMR approved testing laboratories in Poon. You will get fast antigen test results within 30 minutes and that is, your swab will be collected for RT-PCR test if you test positive. In addition to the home collection, it is notable that Pune has several drive-through testing centers such as the one set up by genePath's private lab in the Wakdewadi area. You need a previous booking, carry proof of your ID, and a fee for the test. You can walk or drive your way to these centers and need swab collectors without you having to get out of your car. COVID test at Pune airport for arrival of passengers only recently, Mumbai airport became the country's second airport to begin International entry for COVID-19 after New Delhi. But unlike the capital city of Maharashtra, such a testing facility has not yet been rolled out at Poon International Airport. As in the Poon quarantine rules, all airport arrivals will undergo thermal screening. Those who show symptoms will be referred to any of the above hospitals or laboratories. The rest of the passengers are stamped out for home quarantine. How much does COVID tests cost in Poon? ICMR encourages laboratories and hospitals to conduct tests at no cost or at least at affordable rates. It is expected to pay around INR 2200 as it has the maximum new rate set by the Maharashtra government. Collection fees include PPE+ consultation charges along with the actual cost of the test. To collect the house, the price is closed at INR 2800. Sample testing in government laboratories is free of charge. In several testing centers set up by the City of Poon Company, you can test yourself for as little as inr 500 to INR 550. The initiative is to test residents voluntarily even if they have no history of contact with a COVID-positive person. Fast antigen test kits are usually available in the country in INR 450 while antibody testing costs around INR 750.When should you take the COVID test? Sure, this is the most confusing part of the early stage of COVID-19 symptoms nothing different from your common flu. The wide range of symptoms in infected people with some even going asymptomatic makes it easier. But in most cases, the following symptoms tend to last longer than regular fever or flu itself:FeverDifficulties in CoughOther breathing clinical symptoms included in the list by ICMR include: FatigueMucous throat pain forming and running noseMuscle painAnosmia or loss of tasteAgeusia or loss of odor digestive problems is also not uncommon. It is best if you have any symptoms of levels, you seek medical help rather than indulge in the drug itself. Take the medications as prescribed by your doctor. If you see symptoms persist for more than three days even after the drug is prescribed, you can go for a COVID test. ICMR also prioritizes testing of high-risk calls and unsymed suspects who need to undergo any acute surgery. The high-risk category includes people in their 60s or older and those who suffer from non-communicable diseases such as cancer, diabetes, chronic kidney disease, high blood pressure, heart disease, etc. If you are suffering from influenza or other acute respiratory infections, the same applies to you. If you wish to travel to a foreign state or nation that wants to negatively report a COVID-19 test before arrival, you can get a test done, thanks to the advice of the Department of Health Union on 'on-demand testing'. Even if you don't travel, you can try if you want, for other practical reasons. That being said, try to test out the horrors or fears as that over-loads the health authorities for no reason. To avoid potential foul play, you The test itself is done only from a valid ICMR testing facility. If needed, you can check the accuracy of the laboratory by checking your ICMR registration number, which governing body governments should be prominently listed by laboratories in test reports. What documents are required for the COVID test? For every COVID test in Pune, you need to bring a doctor's prescription as the Ministry of Health and Family Welfare is obliged in India. You also need to provide proof of your Pune address using government ID (Aadhar card/passport/voter card) and ICMR sample referral form for COVID-19 filled with suspicious patient details. For some laboratories, you can find similar patient information forms on your respective websites. At the time of collecting the sample, the lab will also collect your phone number. How long do I take my COVID test results? RT-PCR tests can be completed in less than three hours. However, due to the large number of on-the-ground tests, labs anywhere take between six hours and a day to disclose test reports. Government units can take up to 48 hours after collecting the sample. Until the test results are achieved, you should stay in isolation to prevent potential transmission of the virus. Rapid tests typically produce positive or negative results within 30 minutes. While the result is quick, they serve the purpose of purely preliminary tests rather than giving any reliable, significant results. TruNat takes about 60 minutes to interpret. What happens after the exam? Test labs will inform you of the test results either by phone or by email. If you are testing positive for coronavirus, stay calm and call the nearest hospital for check-ups. Follow along with the directions of the health authorities. Other residents of your home are likely to undergo a COVID test as in the health team guidelines. They also began tracking calls and putting them in quarantine unless a test is arranged. Note that you don't have to rush to the hospital the moment you test positive for coronavirus. Asymptomatic cases or those with mild symptoms are often deemed suitable for home isolation. Apartments with at least two separate rooms with separate restrooms can be eligible for home isolation. Otherwise, medical authorities would have transferred you to a COVID care facility. So, yeah. You can probably stay at home even if you are COVID positive. You will have all prescribed medications and pulse oxymeter. Other consultations will take place on the phone. Download the Aarogya Setu app which will allow the nearest hospital to know about its health condition. If your case deteriorates, it will be transferred to a dedicated care facility. Center.
